

Proven Protection for Wrapped Bales

- **Suitable for use on conventional and high speed bale wrappers**
- **High tack level for excellent sealing between layers**
- **Consistently high performance in all weather conditions**
- **Proven performance on millions of bales**
- **Backed by an experienced sales and technical team**

Since Visqueen Poliwrap was launched in the mid-1980s it has become one of the most popular and widely used balewrap films. Farmers across the world have found that its high tack level and long life provide trouble-free wrapping and excellent protection for silage bales during the long winter storage months.

Proven Protection for Wrapped Bales

Strength

Visqueen Poliwrap is manufactured by the pioneers of multi-layer balewrap products. Years of experience and consistent ongoing development have ensured that characteristics such as stretch strength and tear resistance have been optimised. All of which means that Visqueen Poliwrap is ideal for use on today's high-speed, square bale and combination bale wrappers.

High Puncture Resistance

Lower quality films can be prone to puncturing, despite the fact that modern bale wrappers and handlers are designed to handle bales with maximum care. With this in mind, Visqueen Poliwrap has been formulated to provide better puncture resistance.

Unique Tack Characteristics

A successful balewrap film must provide the best possible air barrier around the bale as well as preventing leakage of any silage juices. Visqueen Poliwrap's high tack characteristics provide instant adherence of film layers when wrapping, whilst secondary tack produces an effective bond between layers during storage. This same high tack level ensures that cut ends adhere quickly to bales, thus eliminating long tails.

A Film for all Climates

Visqueen Poliwrap is manufactured to withstand the various climatic conditions of the world. This ensures that wherever it is used, it can withstand what are often extremely high levels of UV radiation, keeping the bales safe and secure during the storage period.

Working Together

Visqueen Poliwrap is backed by an ongoing research and development programme aimed at continually improving the performance of balewrap film, harnessing the latest manufacturing techniques and meeting the requirements of state-of-the-art wrapping machines.

Visqueen Poliwrap customers not only benefit from the latest balewrap technology, but also the expert advice and after-sales service from our in-house team of bale wrap specialists.

Technical specifications for standard products

Reel Width	Colour	Reel length	Film thickness
500mm	Black/Green White	1800m	25 µm
750mm	Black/Green White	1500m	25 µm
